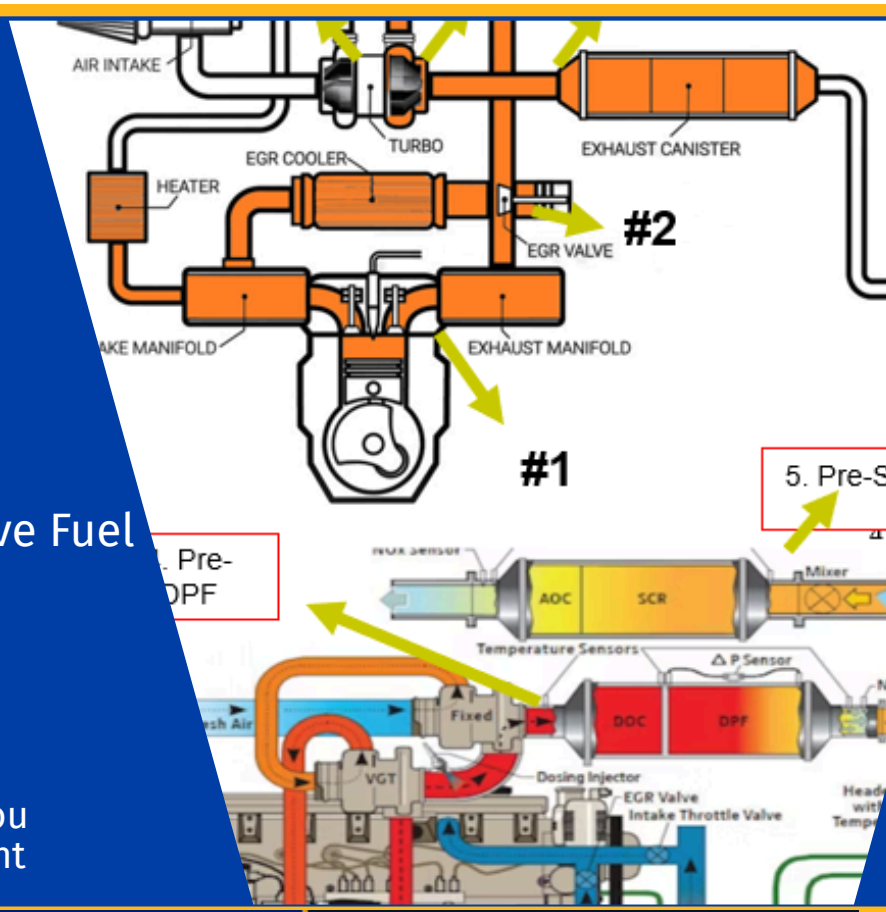
FLEET EXHAUST LEAK DETECTION

Check Your Exhaust leaks and Save Fuel



Conducted by:

- Certified techs + UCR Researchers
- 15 min/vehicle — no teardown
- Scheduled around your operation
- Summary Finding Pics Provived to you
- 100% Research, No CARB Enforcement

Free Exhaust Leak Check

We come to your yard. **15 minutes per truck.** Expedited report + photos. Class 4–8 on-road diesel. CARB research data — no enforcement action.

- 15 Min / Vehicle
- Expedited Report + Photos
- Class 4–8 Trucks
- Research Data — No Enforcement
- No Disassembly Required

5 POINTS CHECKED PER VEHICLE

1. **Engine Head / Manifold** — Most common on high-mileage units
2. **EGR System** — Often missed in routine PM
3. **Turbocharger Outlet** — V-band clamp fatigue from heat
4. **Pre-DPF (Before Filter)** — Bypasses soot capture entirely
5. **Pre-SCR (Before NOx Treatment)** — DEF injector flange degradation

#1	#2	#3	#4	#5
Engine Head / Manifold	EGR System	Turbocharger Outlet	Pre-DPF	Pre-SCR
Gasket compression from heat cycles	Clamp loosening, valve seat erosion	V-band clamp fatigue from heat stress	Clamps loosen during regen cycles	DEF injector flange degradation
~$150	$50–$200	~$220	~$120	~$249
